Trans. of Uspekhi Khimii (USSR) 1958, v. 27, no. 5, p. €22-€42.

A literature survey shows that three methods are practical for the production of α-oxide rings: (1) direct oxidation of unsaturated compounds by peracids, or in some cases by oxygen in the presence of a catalyst or by hydrogen peroxide in an alkaline medium; (2) hypochlorination of olefins followed by treatment of the resulting halohydrin with an alkali; and (3) condensation of carbonyl compounds with esters of α-chloroacetic acid or with a haloacetophenone to give glycidic esters or ketoxides.
